

JOB CRITERIA  
POWER GENERATION SPECIALIST (S)

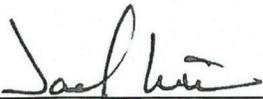

This is a Power Generation Division multifunctional classification that combines leadership skills and the skills of a plant control center operator with that of a maintenance technician discipline. This individual provides real time surveillance and operation/control of all control room systems and plant equipment for multiple sites. This position will report to a supervisor.

Minimum Requirements for the job:

1. Must have successfully held or currently hold the position of Production Leader, Shift Technician, Production Specialist, or similar industry position.
2. Must have successfully been, or currently, be qualified to operate a control center. These qualifications must have been held for a minimum of one year.

Basic Accountabilities:

1. Responsible for the operation of multiple sites. This position monitors performance and operating characteristics, identifies equipment deficiencies, takes necessary action to prevent or limit failure, and optimizes efficiency of multiple sites.
2. Utilizes effective communication while providing direction and leadership to multiple site operations shift teams to ensure safe and reliable operation of multiple sites and site's equipment.
3. Completes appropriate documentation for accuracy of accounting and/or equipment history.
4. Functions as designed in support of other classifications and their respective accountability.
5. Must be able to complete the PGS training requirements.
6. Must be able to work a variety of hours / days due to continuously rotating shifts
7. Issue and assist with executing the in-plant clearances and assist with executing BES switching orders as required.
8. Performs associated responsibilities according to established safe work practices and the Memorandum of Agreement.
